

HDCS- Chaurjahari Hospital Rukum Nepal.

Report on impact of Share light and Purilight at Chaurjahari Municipality Rukum

Chaurjahari Municipality lies in western part of remote Nepal in Karnali province. Which is the poorest, least developed and most backward province among all province. We receive purilight, sharelight and water purification system by the support of Celltrion, ShareLight, and Team and Team international Korea. Thousands of people from our region suffer from lack of clean water, sanitation and hygiene problem as well as health and social problem. Purilight, sharelight and water purification system has help to improve sanitation and hygiene including education for the children of this area.

- 1. Purilight :** In society like our where source of drinking water is open source like rivers, tap water. Some people are not aware about purifying drinking water and aware people also don't have means of purification due to unstable economy. Gathering food is more important for them than buying filtration devices. We have distributed purilight in the society and in sixteen health post. Purilight has become precious gift for them. People are very happy and are using purilight to sterilize water daily. In the health post we have distributed they are using it for water purification for themselves and patient and to sterilize instrument. In our hospital also we are using it to purify water and sterilization in outreach clinics and medical camps. What we feel is now people are aware about important of purifying water.

2. **Sharelight:** In our community the electricity line came only for 3 to 4 hours and there are some houses where there is no electricity. Electricity problem is one of the main problem for the students. So we have distributed sharelight in the schools. And some houses in the villages. Students and villagers were extremely happy. Now students can read well and happily without any worry of light.

- 3. Water purification system:** we have instilled water purification system in our hospital. Due to it around 300 to 400 patients and visitors are benefited. We are distributing pure water for free so they no longer need to buy water to drink. 40 staff and their family are also using this pure water. Water purification system has played a great role in controlling waterborne diseases like diarrhea, cholera in our community. We are very thankful for your help.

We and our community is very thankful for your help, your great contribution in making our society better and making us a part of your new innovation.

Sincerely,

Dil Bahadur Giri

Hospital Administrator.
